Soft PVC lapel pins

Promotional soft pvc customized for great relief and multi-colors pins of any shape and type.

The most common soft pvc pins come with a metal butterfly clutch, the same used on metal enamel pins. But we can also use plastic butterfly clutch.

Another way, is to use two magnet, one insert inside the pvc magnet and the other free. This enable to fix a magnet on a cloth without having to piece a hole, like the regular butterfly clutch and needle pins do.

Logo process

2D PVC Cloisonne

2D, also called 2D relief or multilevel, is the most common and basic quality of soft pvc. Tooling more simple and cheaper, it can be open by regular CNC.

You can have as many different level as you like, but each level surface is flat, like staircase. It is recommended to always make lettering and small details in relief, a level up from the base or background color.

3D PVC Cloisonne

Tooling are more expensive and sophisticated, they can only be open with a numerical CNC machine, similar to plastic injection tooling.

In the case of 3D you don't have actual different level, but progressive level, without flat surface, but convex and oblong surface. 3D is more suitable when the design consist of character & cartoon like personage or animal.
