Metal enamel flashing pins

Pins can be made with a **small micro chips, PCB and battery on the back** with led light on the front. You can have one or light or more, flashing light, continuous light, light in different colors.

Blinking pins are usually made in either photo etch or offset printing so the front is thinner and it is easier to place hole of the LED light and have the light come throughout the pins.

Beside flashing pins you can have pins with IC chips & board with sound and music, pre-recording message or voice, or pins with recording capabilities when you can record and change message at will.

Flashing & blinking pins are use for disco, Halloween and all kind of party & event.

Options available

OFFSET ON ALUMINIUM
